Registration number if acting under 37 CFR 1.34. _____ </div> <div style="width: 45%; text-align: right;">  Signature Martin R. Geissler Typed or printed name 1.703.621.7140 Telephone number February 6, 2012 Date </div> </div> <p>NOTE: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required. Submit multiple forms if more than one signature is required, see below*.</p>			
<input type="checkbox"/> *Total of _____ forms are submitted.			

This collection of information is required by 35 U.S.C. 132. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11, 1.14 and 41.6. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop AF, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

STATEMENT IN SUPPORT OF REQUEST FOR PRE-APPEAL BRIEF REVIEW

Sir:

Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for reciting that a second composition comprises cerium while claim 15 from which it depends recites that the second composition comprises boron. It is respectfully submitted that claim 17 requires a composition that includes both cerium and boron, consistent with the recitation of boron and/or cerium in, for example, claim 1. Claim 17 is therefore submitted to be definite and supported by the original specification.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Inbe in view of Troczynski. Claim 1 recites, inter alia, a heat exchanger having a number of heat transfer surfaces made from aluminum or aluminum compounds to which a plurality of layers have been applied. The first layer comprises nanoparticles of a first composition, providing corrosion resistance, and the second layer comprises nanoparticles of a second composition different than said first composition and having

hydrophilic properties. The nanoparticles of the first layer or the second layer comprise organic and/or inorganic compounds of boron and/or cerium dissolved and/or dispersed in inorganic and/or organic solvents, and each layer thickness amounts to less than 1 μm or equal to 1 μm , and the total layer thickness amounts to less than 5 μm or equal to 5 μm .

Inbe does not show a corrosion resistant layer having nanoparticles as claimed or a corrosion resistant layer having the claimed thickness or a hydrophilic layer having the claimed thickness. However, Trocznski disclose a 50 μm thick anticorrosion layer comprising nanoparticles. It might be possible to use Trocznski's disclosed anticorrosion layer as the anticorrosion layer of Inbe. However, in order to meet the limitations of claim 1, Trocznski's anticorrosion layer would have to be reduced in thickness by a factor of 50. Applicant maintains that the record does not include a proper reason for thinning Trocznski's anticorrosion layer in this manner and therefore submits that the requirements of *KSR International Co. v. Teleflex, Inc.*, 550 U.S. 398 (2007) have not been satisfied and that claim 1 is allowable over the art of record.

Applicant has argued that "obvious design expedient" is not a legally sufficient reason for changing the thickness of Trocznski's anticorrosion layer. The examiner did not respond to this argument except to state that the rejection also included the statement: "One of ordinary skill in the art would employ any layer thickness to achieve a desired strength, longevity, effectiveness or heat transfer." It is respectfully submitted that this statement, taken alone or in combination with the "obvious design expedient" statement, does not constitute a reason for using an anticorrosive layer that is 98% thinner than the one disclosed in the art.

It is respectfully submitted that the record does not indicate what strength, longevity, effectiveness or heat transfer would be desired by a person of ordinary skill in the art or how reducing the thickness of a given layer by a factor of 50 would achieve such a result. It seems reasonable that high strength, long life and good effectiveness would be desirable, but nothing in the record suggests that any of these qualities will be achieved by reducing the thickness of an anticorrosion layer by 98%. And, assuming for sake of argument only that removing substantially all of Troczynski's anticorrosive layer would improve heat transfer, nothing in the record suggests that Troczynski's anticorrosive layer would still satisfactorily perform its anticorrosive function if reduced in thickness in this manner. This change is thus more likely to render Troczynski's anticorrosive layer unsatisfactory for its intended purpose, a non-obvious change according to MPEP 2143.01, rather than provide any advantage.

The Advisory Action refers to DE 10213756 and Yoon, neither of which is applied in the present rejection of claim 1. These references each disclose thin layers of coating materials that are different from what is disclosed in Troczynski and different from what is disclosed in claim 1. The fact that various thin coating layers are known to exist does not constitute a reason for reducing the thickness of Troczynski's anticorrosive layer by 98%, and mentioning these new references in an Advisory Action does not provide further support for the rejection of claim 1.

Nothing in the record suggests that a person looking at Inbe and considering what anticorrosive material to use would select the material of Troczynski and then apply no more than 1 μm of it (instead of the 50 μm as disclosed) and expect to achieve a useful result. For these reasons, it is respectfully submitted that the statement "One of

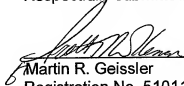

ordinary skill in the art would employ any layer thickness to achieve a desired strength, longevity, effectiveness or heat transfer" does not constitute a reason for a person of ordinary skill in the art to thin Troczynski's anticorrosive layer by a factor of 50 before adding it to Inbe. Claim 1 is submitted to be allowable for at least this reason.

Claims 7-10 and 13 depend from claim 1 and are submitted to be allowable for at least the same reasons as claim 1.

It is respectfully submitted that the foregoing arguments also show that a prima facie case of obviousness has not been presented in connection with independent claim 14. Claims 15-17 depend from claim 14 and are submitted to be allowable for at least the same reasons as claim 14.

Claims 15 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inbe in view of Troczynski and further in view of Niemeier. Claims 15 and 17 depend from claim 14. Niemeier does not address the shortcomings of Inbe and Troczynski discussed above. Claims 15 and 17 are therefore submitted to be allowable for at least the same reasons as claim 14.

Respectfully submitted,

Martin R. Geissler
